

What's in Your Waste?

Why Do a Waste Audit?

A waste audit is a way to see what your school's rubbish is made up of so that you can make a plan for reducing, reusing and recycling. It seems like a yucky, dirty task, but believe it or not, kids and adults usually have fun with it. The results of a waste audit can help your school determine what areas need work and how best to start your waste reduction project.

The best time to do a waste audit is at the beginning of the school year or before you make changes to your programme. Do another waste audit a month or so after making changes and at the end of the school year to chart your progress. This will get your school on its way to becoming a Green School!

The Basic Plan

STEP 1

Form a Green School Committee or Waste/Recycling team to coordinate waste sort and recycling efforts at your school.

STEP 2

Conduct an audit of school waste. Choose to sort waste from the whole school, the canteen, classrooms, office or staff room.

STEP 3

Evaluate the results. Use the waste audit form to record your findings, calculate percentages and create graphs or charts of the schools waste. Use this information to create a waste reduction plan for your school.

STEP 4

Present the audit results and the waste reduction plan to your principal and the rest of your school. Put your plan into action! Be sure to provide plenty of training for new procedures and promote the new program with signs, announcements and in the school newsletter.

Conducting the Waste Audit

Time

Approximately one hour, with 5-10 students.

Equipment needed

Rubber gloves, large plastic cover, extra rubbish bags, scales, several large buckets, waste category signs, and waste audit forms.

Before the audit

Obtain permission to conduct the audit in the canteen, hall, or in a covered area outdoors and work with your teacher to save or collect canteen and/or classroom and office rubbish from previous day.

Safety considerations: Please do not sort bathroom or health room waste. Wear closed-toe shoes.

What's in Your Waste?

The Audit

1. Using the waste audit form, record where the waste was collected from (classrooms, canteen, etc.).
2. Put on gloves and estimate the total volume and weight of the waste to be audited. Record on form. Weight: weigh the unopened bags of rubbish (with a bathroom-type scale, have a student hold the bag while standing on the scale, then subtract the student's weight). Volume: compare volume to the large buckets.
3. Empty the contents of the bag on plastic cover and sort into waste categories listed on the form.
4. Record the weight and estimate the volume for each of the categories. Weight: put in buckets and weigh, subtract weight of bucket. Volume: estimate volume by measuring how much of the bucket is full.
5. Make notes about items that you find a lot of in the rubbish - types of food, drink cans, etc., or other interesting things you observe.
6. Clean up! Return non-recyclables to general waste bins and sort recyclables into recycling bins. Wash plastic cover and buckets, sweep floor.

Post-Audit Activities

1. Complete calculations on the waste audit form. Use these numbers to chart or graph your school's waste by weight and volume.
2. Create a plan to reduce waste based on your findings. Questions to think about:
 - What were the main components of the school's waste?
 - Would the results be different if the sort was done at a different time in the school year?
 - What were some of the items that could have been reused instead of thrown away?
 - How could students reduce how much was thrown away of some of the items?
3. Share the results and the plan with the rest of the school.
4. Put your plan into action.
